

Present in Mexico since 2006, EOSYS helps to facilitate and secure the flow of foreign investments allowed now in the country in order to develop its hydrocarbon industry. With its offices in France and Mexico, EOSYS may help independent operators and investors in their projects in Europe, Africa or Latin America.

Preliminary investigations for pipeline projects

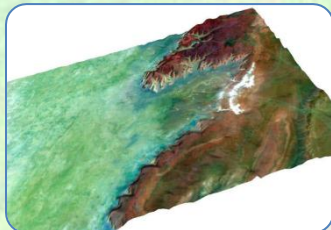

Geomorphological investigations

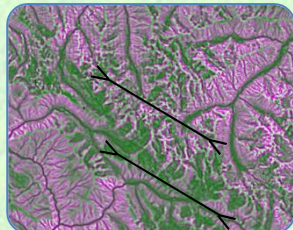

Natural hazards

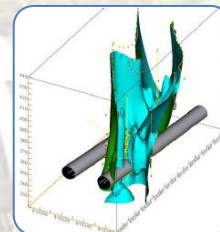

Satellite imagery

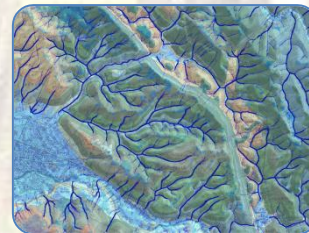

Seismic zonation

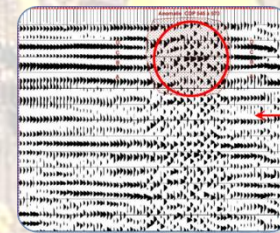

River crossing
Geomechanical properties of terrain

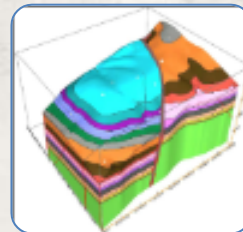

Natural drainage system

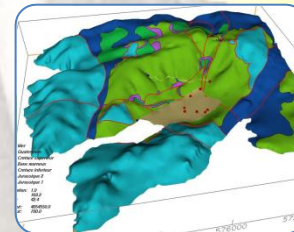

Cavity detection

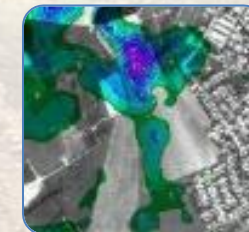

Detailed 3D Geological modelling

Groundwater location, geometry and vulnerability

Simulation of pollution

In-situ seismic surveys

Regional studies

- Satellite image processing
- Detection of major faults
- Detection of unstable slopes

Local and difficult area investigations

- Aerial photography data acquisition and processing
- DEM calculation and morphological processing
- Soil and lithological studies
- Detailed geostructural surveys
- Deep surveys (seismics, resistivity)

Risk area investigations:

- 3D modelling of subsurface geology
- Spill and leak simulation within protected areas
- Environmental risk assessment (slope instability, groundwater pollution)
